                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                         The present sequence encodes a gibberellic acid 2-oxidase 2 protein sequence, which is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels. Gibberellic acid levels may be inhibited or controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthetic pathway sequence, diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, 3beta-hydroxylase, oxidase, phytoene synthase, C-20 oxidase, and a 2beta,3beta-hydroxylase polymucleotides to achieve this. The method is used to control seed germination and seedling growth especially to require gene products of gibberellin biosynthetic pathway and restoration of normal seed germination, in transgenic plants. The plants produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             532

normally reducing agronomic output can be avoided and yields increased. Plants also demonstrate increased uniformity of germination, emergence and seedling vigor, so increasing yields at harvest. The method is especially useful in crop plants such as e.g. canola, soybean, cotton, etc., and is also useful in storage and transport of seeds to reduce premature germination which may affect agronomic or food quality of the seeds. The present sequence is soybean GA 2-oxidase 2 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GATCACAAATCTTTCTTCATAAATGTTGGTGATTCTTCTGGGTTATGACCAATGGAAGG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ATGCCACTCAATGAGAAGGAAAAAGTAGGCCCTCCCAAACCATATGGTATGGTAGCAAG

```
This sequence represents cDNA encoding an Arabidopsis thaliana

gibberalin (GA) 2-oxidase, PcGA20x3. This enzyme is a GA 2-beta-

gibberalin (GA) 2-oxidase, pcGA20x3. This enzyme is a GA 2-beta-

CC gibberalin (GA) 2-oxidase, nc19-chs and for which 2-beta-hydroxylation is

is is only activity. Hydroxylation at the 2-beta position of a GA results

CC A metabolism in plants, ensuring that the active hormones do not

cacumulate in plant tissues. The nucleic acids can be used to transform

plants so that gibberalin 2-oxidase can be constitutively over-expressed

cor otherwise enhanced to reduce the concentration of bloactive GAs in the

plants and therefore to inhibit plant growth. Growth inhibition is useful

corpus and therefore and grain yield in cereals, improving seedling

cuality, reducing the growth of amenity grasses, reducing shoot growth in

corbard and ornamental trees, improving tolerance to cold, drought and

corbard and ornamental trees, improving tolerance to cold, drought and

corbard and increasing yields (by the diversion of assimilates from

vegetative to reproductive organs). The nucleic acids may also be used to

inflection, and increasing yields (by the will acrome and and increasing yields (by the context of acids may also be used to

inflection, expressioning, reduce shoot growth in commercial wood species. Antisense constructs of

reduce shoot growth in commercial wood species. Antisense constructs of

the nucleic acids can also be used to transform plants to reduce the

```
HVMDR2, ABC transporter, PMP70 ABC transporter and MRP4 ABC transporter.

The nucleic acid fragments may be used to create transgenic plants where the polymeptides are present at higher or lower levels than normal or in cell types or in developmental stages in which they are not normally cell types or in developmental stages in which they are not normally properties or in developmental stages in which they are not normally conditions. The polymucleotides can be used as probes for genetically and physically mapping genes and as markers for traits linked to those genes. The nucleic acid fragments may be used as restriction fragment length colymorphism (RFLP). It can also be used to probe Southern blots containing restriction endonuclease-treated genomic DNAs of a set of individuals representing parent and progeny of a defined genetic cross. The nucleic acid fragments may also be used as hybridisation probes against PCR amplification products generated from the mutation population using the mutation tag sequence primer in conjunction with an arbitrary genomic site primer. The peptides can also be used to immunise animals to produce polyclonal or monoclonal antibodies with specificity for peptides or produce polyclonal or monoclonal antibodies with specificity for peptides for detecting the polypeptides in altu in cells or in vitro in cell carrieds.

This sequence represents cuts encoding an Arabidopsis in Allandopsis in Allandopsis in Allandopsis in Allandopsis in Allandopsis configuration of a GA results by droxylase that acts on C19-GAs and for which 2-beta-hydroxylation is the only activity. Hydroxylation at the 2-beta position of a GA results in a biologically inactive product, and is the most important route for GA metabolism in plants, ensuring that the active hormones do not accumulate in plant tissues. The nucleic acids can be used to transform plants so that gibberellin 2-oxidase can be constitutively over-expressed or otherwise enhanced to reduce the concentration of bioactive GABs in the plants and hortrucultural applications such as enhancing cor otherwise enhanced to reduce the concentration of bioactive GABs in the plants and therefore to inhibit plant growth inhibitation is useful cording and contamental trees, improving tolerance to cold, drought and cordinary and increasing yields (by the diversion of assimilates from cordinary and increasing yields (by the diversion of assimilates from vegetative to reproductive organs). The nucleic acids may also be used to induce male and/or female sterility (by expression in floral organs), prevent pre-harvest sprouting, reduce growth in hedging plants, inhibit reversibility in the development or germination of seeds and creduce shoot growth in commercial wood species. Antisense constructs of the nucleic acids can also be used to transform plants to reduce the expression of GA 2-oxidase (claimed) to promote plant growth, est, to ease, improve skin texture and fruit shape in apples, increase stem clangor, improve malting yields and quality in cereals increase growth in woody species (particularly barley), and increase growth in woody species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        d plant gibberellin 2-oxidase enzymes and nucleic acids, used transgenic plants with improved or altered growth
                                                                                                                                                                       2-oxidase; AtGA2ox1; 2-beta-hydroxylation; inactivation;

//note="Vector: pSPORT1; Site_1: Sal1; Site_2: NotI; This cDNA library was constructed from mRNA isolated from seed coats (100-200mgs) of greenhouse grown plants. The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complimentary DNA was synthesized from mRNA using a poly (41) sequence with a Not I restrictions site. Sal I linkers adapers were ligated to the blunt-ended cDNA fragments followed by Not I digestion. The cDNA fragments were directionally cloned into the Not I sal I restriction site of the pSPORT1 vector. The ligated cDNA fragments were transformed into E.coli Electromax DH10B host cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 3
```

immature seed coats (libraries Gm-c1019 and Gm-c1023); 917 cDNAs from tissue culture derived somatic embryos (source libraries Gm-c1056, and Gm-c1056, cDNAs from germinating seedlings, shoot tips, or leaves exposed to various stresses (source libraries Gm-c1066, and Gm-c1067, and Gm-c1064, Gm-c1065, Gm-c1066, and Gm-c1067, and Gm-c1073, and span by the close from the dungal pathogens (source libraries Gm-c1072, Gm-c1073, and Gm-c1074). The Source clones from the different libraries was used to select singletons, or a representative of each contig, which were reacked to form library Gm-r1088 and the CDNA clones of the reracked Gm-r1088 library were then sequencing was funded by NSF Plant Genome project #9872565 (http://soybeangenomics.cropsoi.uiu.edu/) as part of creation of a low redundancy soybean cDNA set. The source CDNA libraries were constructed by the laboratories of Lila Vodkin, University, and Paul Kelim, Northern Arizona University, and Paul Kelim, Northern Arizona University, and Paul Kelim, Northern Arizona University as part of the Public EST project, the set Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, sequencing were conducted by services of the University of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, sequencing were conducted by services of the University of Engented Marie EST from each clone can also information on the source library for each clone can also be obtained by referring to the Genome Systems clone ID of the Ormarial CDNA library that is also listed under 'OTHER EST'.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                           L SUBMILIER (18-NOV-2003) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (B-mail : seqrefégenoscope.cns.fr - Web : www.genoscope.cns.fr)

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G. Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.
                                                                                                   Castelli, V., Aury, J.M., Jaillon, O., Wincker, P., Clepet, C., Menard, M., Cruaud, C., Quetier, F., Scarpelli, C., Schachter, V., Temple, G., Caboche, M., Weisenbach, J. and Salanoubat, M. Whole Genome Sequence Comparisons and 'Full-Length' cDNA Sequences: A Combined Approach to Evaluate and Improve Arabidopsis Genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              265
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      325

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Direct Submission

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage :

BP 191 91006 EWRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G.

Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Arabidopsis thaliana Full-length cDNA Complete sequence from clone GSLTPGH202C07 of Hormone Treated Callus of strain col-0 of Arabidopsis thaliana (thale cress).

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage :
BP 191 91006 EVRY cedex - FRANCE (B-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)
The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out
full-length librairies construction : Temple G.
Genoscope members carried out sequencing and annotation : Castelli
V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C.,
Schachter V., Weissenbach J., Salanoubat M.
URGY INRA : Clopet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis
genome released by MIPS (Munich Information center for Protein
Sequences) : 5 prime and 3 prime are assembled with Phrap.
                                                                  Sukaryota; Viridiplantae, Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnollophyta; eudicotyledons; core eudicotyledons; rosids; eurosida II; Brassicales; Brassicaceae; Arabidopsis.

/ Lissue_Type="floral meristematic mRNA provided by Dr. Hailna Knap of Clemson
/ Miversity. Complementary NDA was synthesized from mRNA
using a primer consisting of a poly(dT) sequence with a
XhoI restriction site. ECORI adapters were ligated to the
blunt-ended cDNA fragments followed by XhoI digestion. The
CDNA fragments were directionally cloned into the
ECORI-XhoI restriction site of the pBluescript vector. The
ligated cDNA fragments were transformed into blut bost
cells (GibcobRL). This library was constructed in the
laboratory of Dr. Randy Shoemaker."

When you have constructed the sequence of the sequences are based on single pass reads.

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction: Temple G.

Genoscope members carried out sequencing and annotation: Castelli V., Aury J. W., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA: Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

//Glone lib="Gm-cl069"
//note="Vector: pBluescript II SK+; Site I: EcoRI; Site 2:
XhoI; The cDNA library was constructed from mRNA isolated
from degenerating cotyledons of 9-10 day old etiolated
seedlings for the cultivar Williams. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with a XhoI restriction site. EcoRI
adapters were ligated to the blunt-ended cDNA fragments
followed by XhoI digestion. The cDNA fragments were
directionally cloned into the EcoRI xhoI restriction site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      125 TCCACGCCCTTGTTCACGGGGATTCCTGTGGTCGACCTCACGCACCCCCGATGCCAAGAAT 184

/note="Vector: pBluescript II SK(+) XR; Site 1: EcoRI;
Site 2: Xhoi; supplier: Pathogen-challenge series. Tubers
from pathogen-free Solanum tuberosum var. Shepody, clone
1756, were inoculated with 5 ul of Phytophthora infestans
(A2-mating type), through 2 puncture wounds 3 cm apart.
The tubers were inocubated 1 minute to allow inoculum
absorption. The infection area was outlined for future
collection reference. Surface splices were sampled from the
tubers at 1 day, 5 days, 7 days, 11 days and 14 days
post-infection All samples were pooled and used for RNA
isolation and library construction. A normalized library
was constructed following a modified protocol of Bonaldo
et al. (1996. Genome Research 6: 791-806)."

                  /note="Vector: pBluescript pSK; Site 1: ECORI; Site 2: Xho1; M. truncatula sterilised seeds were germinated for 72h at 25 C, before transplanting into a 1/3 Epoisses soil: 2/3 calcined Terragreen mix in the presence of onion root fragments colonized by the arbuscular mycorrhizal fungus Glomus intraradices (Schenck & Smith, isolate LPA8). The plants were watered every day and twice a week with a modified nutrient Long Ashton solution without phosphate but with a high level of nitrate. After 3 weeks RNA was extracted from whole root systems. CDNA was prepared from poly4+ enriched RNA. The cDNA was prepared from poly4+ enriched RNA. The cDNA was prepared from poly4+ enriched RNA. The cDNA was preased from poly4+ enriched RNA inserts were stracts. Plasmids containing cDNA inserts were mass-excised from plage stocks using EXAssit helper phage and propagated in SOLR cells. Clone ordering and sequencing was performed by the Centre National de Sequencage (Genoscope, Evry, France). Note: EST may be of fungal origin."
